1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In claim 4, line 6, "an" has been deleted.

In claims 8 and 9, line 1, "6" has been changed to --7--.

In claims 11 and 12, line 1, "9" has been changed to --10--.

The above changes are made in order to provide proper antecedent basis and to correct the claim languages in the claims.

2. The following is an examiner's statement of reasons for allowance: the prior art fails to show or fairly suggest a video signal reproducing apparatus and method thereof, which transforms a format of an input video signal, generates horizontal and vertical synchronous signals, and displays the transformed video signal, having the combinations as claimed, including a measurer measuring a period of the horizontal synchronous signal, a comparator comparing the measured period of the horizontal synchronous signal with a predetermined reference range, and an adjustor adjusting a period of a clock signal, for producing the horizontal synchronous signal, if the measured period of the horizontal synchronous signal fails to fall within the predetermined reference range, as recited in the claims. Further, the prior art fails to show or fairly suggest a video signal reproducing apparatus having the combination as claimed,

Art Unit: 2622

including a converter converting an input analog video signal into a digital video signal, a line buffer, a scaler transforming a format of the digital video signal and then outputting the transformed digital video signal, a controller controlling timing of inputting the digital video signal into the line buffer and timing of outputting the display line of the digital video signal from the line buffer to the scaler, and producing horizontal and vertical synchronous signals, and a horizontal synchronous signal detector measuring a period of the horizontal synchronous signal, adjusting a period of a clock signal for producing a new horizontal synchronous signal according to the measured period, and providing the controller with the adjusted period of the clock signal, wherein the controller produces the new horizontal synchronous signal using the adjusted clock signal, as recited in the claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sherrie Hsia whose telephone number is (571) 272-7347.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Ometz can be reached on (571) 272-7593.
